

VERASTOR SKY

5-STAR SHADE

Verastor-Sky is the perfect solution to provide shade for skylights and glass enclosures. It can also be used with aluminium structures, or as a horizontal awning that can be inclined or not.

Experts and end-users alike find this product to have the best characteristics for this type of solar protection:

It's easy to operate, safe and installs quickly and simply, as well as having a design that is both attractive and easy to integrate in all types of settings.

Another Verastor-Sky strong point is its extensive coverage capacity, up to 12 metres with a single piece of fabric that remains taught at all times, making it great for enjoying indoor and outdoor spaces.

Easy and safe installation

- Flexible and simple installation means its ready in just a few steps.
- Quick anchoring and attachment for installation in doorways, on structures or between walls.
- The auxiliary assembly kit supports the weight of the cassette during installation and minimises risks related to working with elevated heavy objects.

Reduces installation and assembly time

- Its ease of installation represents a significant saving in time and expense for professional installers.
- The upper opening system means the rolling unit can be put in simply by taking off the weather cover.

Wide range of installation possibilities

In addition to installation on structures and between walls, Verastor-Sky can be installed directly in doorways or porticos, creating a welcoming sunshade for your terrace or the entrance to your home.

Fantastic dimensions with a single piece of fabric:

- With three tensioning guides and a single piece of fabric you can cover an area 12m long that extends 6 m.
- Modules 7 x 6 m or 6 x 7 m: with 3 guides.
- With 2 guides 5 m length x 7 m extension. 12 m. Line: with 3 tension guides

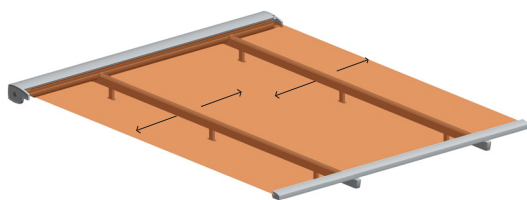

Fabric always taught and wrinkle-free

- Highly durable and with guide pistons that maintain tension.
- Carriage with rollers for smooth and silent movement.
- The pivoting kit with its fabric rollers (for lengths of more than 5 metres) follows the movement of the rolling tube to prevent deformation of the fabric and extension to the correct position.

Sliding Guides

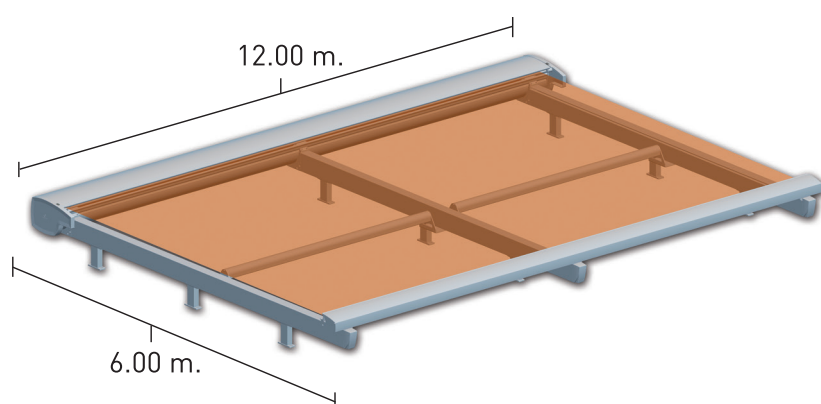

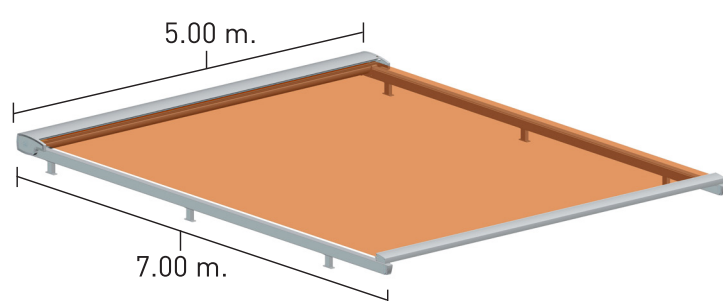

These can be positioned up to 0.5 m from each end. In addition to providing more support to the cassette, they help to adapt the system to the place where it will be installed.
